B2B electronic signatures

Who can sign?

How to reach that person?

How to verify signing rights?

B2C

Signer = known

Recipient = person

B2C

Signer = known

Recipient = person

Signer = (potentially) unknown

B2B

Recipient = organization

Challenges with B2B

- The recipient of the contract may not be the signer

- Multiple signatures may be required

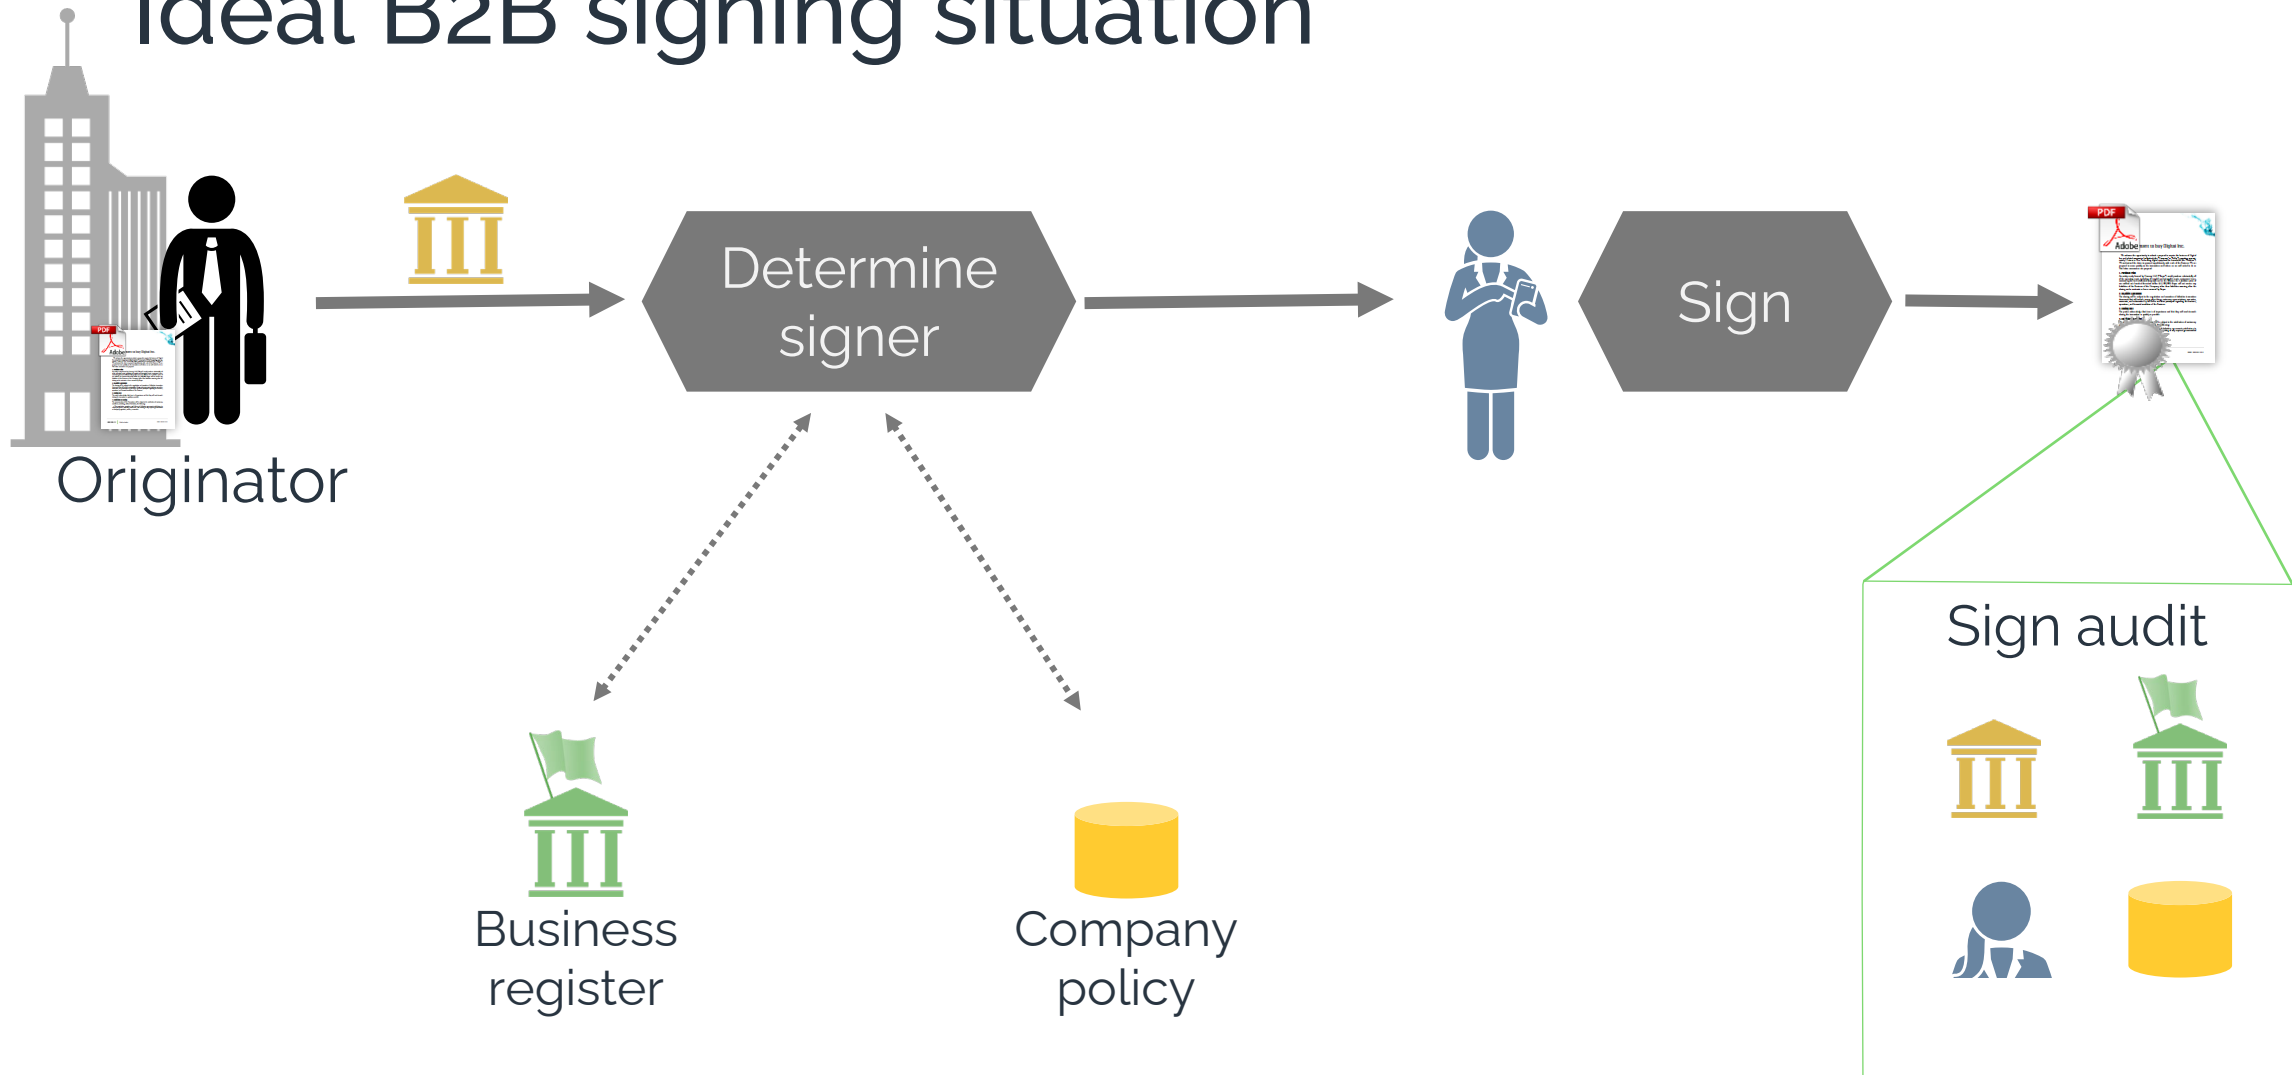

- Depending on risk (e.g. value of contract)

- How to determine if the signer is authorized

Ideal B2B signing situation

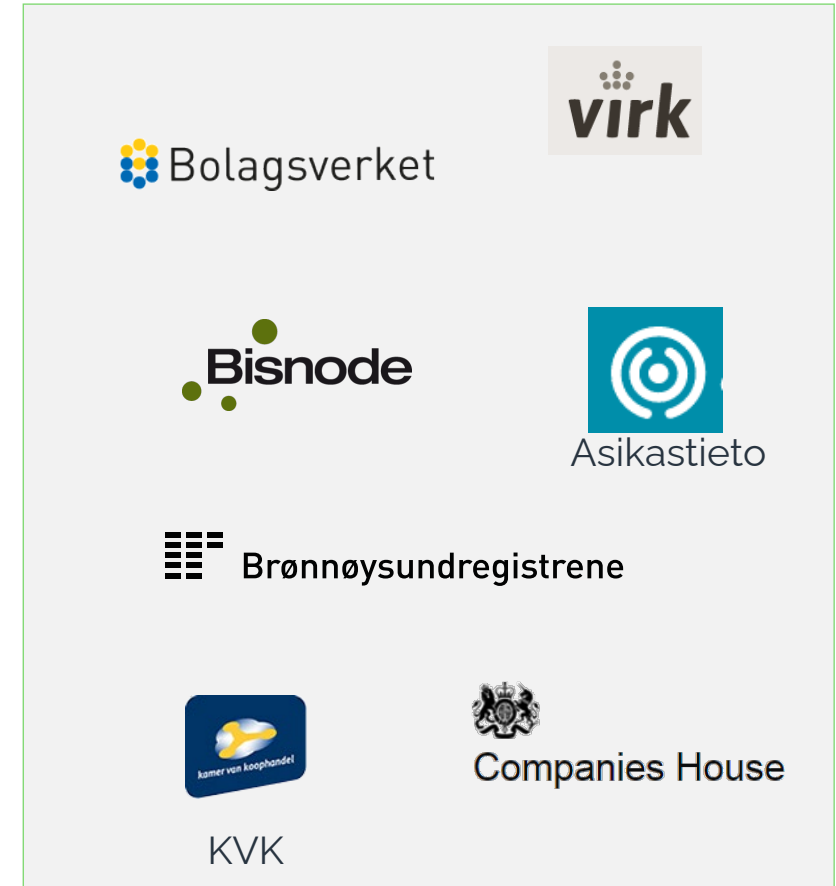

Business registers

- Lack of unique identifiers for people
- Quality?
